

R warnings & errors: Collect 'em all!

<input type="checkbox"/>	Objects of type closure are not subsettable
<input type="checkbox"/>	Did you mean "==" ?
<input type="checkbox"/>	Error: Can't rename columns that don't exist.
<input type="checkbox"/>	50 or more warnings
<input type="checkbox"/>	No such file or directory
<input type="checkbox"/>	Unused argument
<input type="checkbox"/>	Object not interpretable as a factor
<input type="checkbox"/>	"Did you mean +?"
<input type="checkbox"/>	Run <code>`rlang::last_error()`</code> to see where the error occurred
<input type="checkbox"/>	"Error in ... : could not find function "..."

Running into errors and warnings is a completely normal part of programming – even the best of the best can count on it happening daily! Getting comfortable with what the errors mean and how to find the solution is part of your learning journey.

When you've collected them all, tweet us with `#rstats` for some virtual high-fives!
